Simple PDF Merger is a handy program that merges multiple PDF documents into a single document. The app features a simple-to-use interface, in which you can add PDFs from file or directory by using the file browser. No "drag and drop" operation supported here. In the list you can view the file number, source path and number of pages for each PDF document. So, all you have to do is specify the output destination and name, and proceed with the merging process. Plus, you can delete an entry or clear the entire list. The program runs on a low-to-moderate amount of system resources and quickly finishes a task without freezing, crashing or displaying errors. A message pops up to inform you whether the job was a success or not. There is no help file available but that's because Simple PDF Merger is easy enough to be used by individuals with any level of experience. However, we have noticed that the program is missing one very important aspect - it doesn't have buttons which allow you to arrange PDFs in the list. So, you have to import files in the correct position from the beginning (this can be a troublesome task if we're talking about a very large number of PDFs). Otherwise, Simple PDF Merger provides a straightforward solution for joining PDF documents and we strongly recommend it to all users.
